

## **REALIZING THE FUTURE: AN UPDATE ON THE SANFORD STEM CELL CLINICAL CENTER**

Lawrence S. Goldstein, PhD, Distinguished Professor, UCSD School of Medicine; Director, UC San Diego Stem Cell Program; Scientific Director, Sanford Consortium for Regenerative Medicine; Director, Sanford Stem Cell Clinical Center

Dr. Goldstein returns to Town & Gown to update us on the current state of stem cell science as we move aggressively to human clinical trials, how we aim to be responsible and ethical, and how the new Sanford Stem Cell Clinical Center will help make UC San Diego an international center and destination for stem cell and other experimental and cutting-edge therapies.

The goal for the Sanford Stem Cell Clinical Center is to make a difference to patients as rapidly as possible by establishing an internationally recognized, premier stem cell clinical program, constantly fueled by research advances at the Sanford Consortium and surrounding collaborative institutes. It will be known for advancing leading-edge stem cell medicine and science, protecting and counseling patients with cancer and degenerative disorders, and accelerating innovative stem cell research into patient diagnostics and therapy.
