

THE SUPERBUG CRISIS: REDEFINING AND REINVENTING ANTIBIOTICS

Victor Nizet, Professor & Vice Chair for Basic Research, Department of Pediatrics, School of Medicine; Professor & Chief, Division of Host-Microbe Systems & Therapeutics; Skaggs School of Pharmacy

Born of Darwinian evolution, shortsighted over-prescription, and economic disincentive, antibiotic resistance poses one of the greatest threats to global public health and the practice of modern medicine. How can we lift ourselves out of the hole we have dug? By changing the very definition of antibiotics to better collaborate with our own immune systems and maintain the integrity of our healthy microbiome.
